

The Equine Supplement Helping Horses Unlock Peak Performance — Naturally

How 18 All-Natural Amino Acids Are Changing the Way Riders Think About Equine Health

By Staff Writer | March 10, 2026

For performance horse owners, the search for “the missing piece” never really stops.

You fine-tune feed programs. You invest in training. You stay on top of vet work, farrier schedules, and conditioning plans. Yet for many riders, something still feels off: inconsistent toplines, dull coats, nagging soreness, horses that try hard but never quite reach the level you know they’re capable of.

Again and again, experienced owners and trainers are discovering the same thing: it’s not always the big, dramatic issues that hold a horse back. Often, it’s a quiet nutritional gap — especially in the building blocks of protein — that shows up as slower recovery, weaker hooves, poor muscle development, or a horse that just doesn’t have that bright, “ready to work” look.

That realization is driving a growing shift away from “one more generic supplement” and toward something far more targeted: supplying the right amino acids, in the right form, every single day.

One small, veteran-owned company in the U.S. has taken that idea further than most. By focusing on 18 naturally occurring amino acids in a simple, clean formula, they’ve created a supplement that’s gaining attention in performance barns, backyard stables, and even poultry coops across the country.

The Discovery: A Simpler Way to Support the Whole Horse

Remount Equine Supplements was born from a practical problem: how do you give working horses what they truly need for muscle repair, hoof and bone strength, focus, and overall health — without loading them up with sugar, fillers, or a dozen different products?

As a veteran and lifelong horseman, founder Jerry Miller approached the problem the way many owners wish supplement companies would: starting with what horses actually need at the cellular level.

Modern performance demands — cutting, cow horse, Western dressage, trail competition, ranch work, eventing, and more — ask a lot from equine muscles, joints, and nervous systems. Training harder or feeding more grain doesn’t automatically fix the problem. In

fact, it can make things worse if the horse can't efficiently utilize the protein and nutrients you're already feeding.

The key insight behind Remount was simple but powerful:

If you optimize how the horse uses protein — by supplying a broad spectrum of amino acids, including the “limiting” ones that often hold back muscle and tissue development — you can unlock better performance from the feed you're already buying.

Instead of chasing every new trend, Remount focused on a clean, natural, U.S.-sourced formula built around those amino acids and nothing unnecessary. No binders. No preservatives. No complicated “mystery blend.” Just naturally grown plant material processed with a straightforward method designed to preserve its nutritional integrity.

Introducing Remount Equine Supplements: All-Natural Amino Acid Support for Serious Horses

Remount is an all-natural, U.S.-sourced equine supplement built around 18 naturally occurring amino acids — including the three critical “limiting” amino acids: lysine, methionine, and threonine.

Available in both powder and pellet form, Remount is designed to be easy to feed, highly palatable, and simple to integrate into your existing program. It's already being used by professional trainers and competitors across disciplines, as well as owners who simply want to give their horses every advantage in health and longevity.

Where many products try to be everything at once, Remount takes a focused, science-backed approach: supply the amino acids and supportive nutrients your horse needs so the feed you're already feeding can do its job.

****Here's what makes Remount different:****

✓ ****18 all-natural amino acids**** – Supports muscle repair, tissue rebuilding, and overall protein utilization so your horse makes better use of every pound of feed.

✓ ****Includes lysine, methionine, and threonine**** – These “limiting” amino acids are often the bottleneck for topline, hoof quality, and structural strength; when they're lacking, progress stalls no matter how much you feed.

✓ ****Supports hoof wall, bone, skin, and hair growth**** – Owners report stronger feet, healthier coats, and better overall condition as the body has the building blocks it needs to regenerate and maintain tissue.

✓ ****Helps with weight management and body condition**** – By improving how protein is used, many horses can maintain or improve condition without constantly increasing feed, which may also help control feed costs.

✓ ****Promotes mental focus and calm, productive energy**** – Better overall health and more efficient nutrient use can translate into a clearer, more settled mind that's ready to learn and perform.

✓ ****Low sugars and starches, low nitrates**** – Ideal for horses that can't tolerate high-sugar or high-starch feeds but still need robust support for performance and recovery.

✓ ****Made in the USA by a veteran-owned company**** – Remount is sourced and produced domestically, allowing for greater quality control and supporting a small, veteran-led business that truly understands working horses.

Remount's simple ingredient philosophy — naturally grown plant material, no additives, preservatives, or binders — resonates with owners who are tired of guessing what's actually in the bucket.

Real-World Results: From Performance Horses to Poultry

One of the most telling signs that a supplement is doing real work is when professionals whose livelihoods depend on performance quietly adopt it into their daily routine.

Remount has been embraced by ****Shawn Deal Performance Horses owner and trainer Shawn Deal****, a respected performance horse professional, as well as ****Ruckus Performance Equine and trainer Emily Walker, training high level performance horses in multiple disciplines****. These trainers work horses hard, day in and day out — and they don't stick with products that don't pull their weight.

Beyond the arena, owners have seen noticeable before-and-after changes in horses and even poultry. Case examples shared by the brand include visible improvements in body condition and feather quality within just a few weeks of consistent use. The company emphasizes that all mammals can benefit from the amino acids Remount provides — from horses, ponies, and mules to llamas, alpacas, and poultry.

While every animal is different, the common thread is this: when the body finally gets consistent access to a full spectrum of amino acids, it can begin to rebuild, repair, and perform the way it was meant to.

How Does Remount Compare to Traditional Supplements?

Many barns already have shelves full of products: hoof supplements, coat enhancers, calming pastes, muscle builders, joint powders. Remount doesn't try to replace essential veterinary care or specialized products where needed — but for many owners, it can simplify the overall program by addressing one of the deepest nutritional needs: amino acids.

Here's a simple comparison:

Feature	Remount Equine Supplements	Typical "One-Size-Fits-All" Supplement
Core focus	18 all-natural amino acids for protein use	Broad mix of vitamins, minerals, fillers
Key amino acids (lysine, etc.)	✓ Specifically highlighted and supported	✗ Often under-dosed or not clearly listed
Sugar and starch content	✓ Low sugars and starches	✗ Can be higher, especially in pellets
Ingredient simplicity	✓ Naturally grown plant material, no binders	✗ Long labels, artificial binders/preservatives
Ownership and sourcing	✓ Veteran-developed, U.S.-sourced and made	✗ Often corporate-owned, ingredients global
Target outcome	✓ Peak performance and overall health	✗ General "wellness" with vague promises

For owners tired of juggling multiple buckets, Remount's targeted amino acid support offers a straightforward way to shore up the foundation of performance and health.

Special Offer & How to Get Started

Remount is available directly from the company's website, with options in both powder and pellet form so you can choose what fits your barn best. Because the formula is designed for daily use, most owners simply add it to the regular feed routine and let consistency do the work over time.

While pricing and packaging options may vary, the core value proposition remains the same:

- You're supporting a veteran-developed, veteran-owned, U.S.-based company.
- You're investing in a product focused on the fundamental building blocks of equine health.
- You're giving your horse a daily tool to support peak performance and long-term soundness.

The brand also offers show schedule updates and a rewards loyalty program so returning customers can save more over time.

Why Acting Now Matters for Your Horse's Future

Every week that passes in training is either building your horse up or slowly wearing them down. Muscles, hooves, bones, and connective tissue are constantly being stressed and rebuilt — and that rebuilding process is where amino acids do their most important work.

Supporting that process now can mean:

- A stronger, more resilient athlete in the months and years ahead.
- Better performance potential as your horse's body catches up to their heart and talent.
- A more efficient feed program that works with your supplement, not against it.

Horses only get one body. What you do for them nutritionally today helps decide how long and how well they can perform tomorrow.

Ready to Help Your Horse Reach Their True Peak?

If you've been looking for a way to support your horse's performance, recovery, and overall health with a clean, natural, U.S.-made supplement — without adding more sugar, starch, or clutter to your program — Remount is worth serious consideration.

Developed and owned by a U.S. military veteran and horseman, built around 18 all-natural amino acids, and trusted by professional trainers, it represents a modern, practical approach to equine nutrition: give the body what it actually needs, every day, and let the results speak for themselves.
